

Achievements

When I was in primary school, I got the grand prize among 400 students. That was the first and unforgettable prize to me. And then in middle school, I always got first or second prize in our school. Moreover, I got the Math Olympic grand prize in my first-year high school. And I got the second prize in English international speaking event. And in high school, I got an all-round excellence award in my region. I have passed the matriculation examination with four distinctions with high marks. I did not only in school studies, but I also did the external curriculum activities and got many prizes. I got many essay prizes about international teachers' day or about the warmth of the ozone or about how to protect nature. Moreover, I participated in some physical training courses and won prizes when I was in high school. I attended British Council classes and got certificates after the high school. I also got PET and KET certificates which are based on English learning program. Moreover, I attended computer school in my hometown and studied a little about programming and how to draw 3D animation.
